

Customer receipt selection

The Shopify POS checkout can now prompt customers to select how they would like to receive a receipt and seamlessly enter their email for digital receipts.

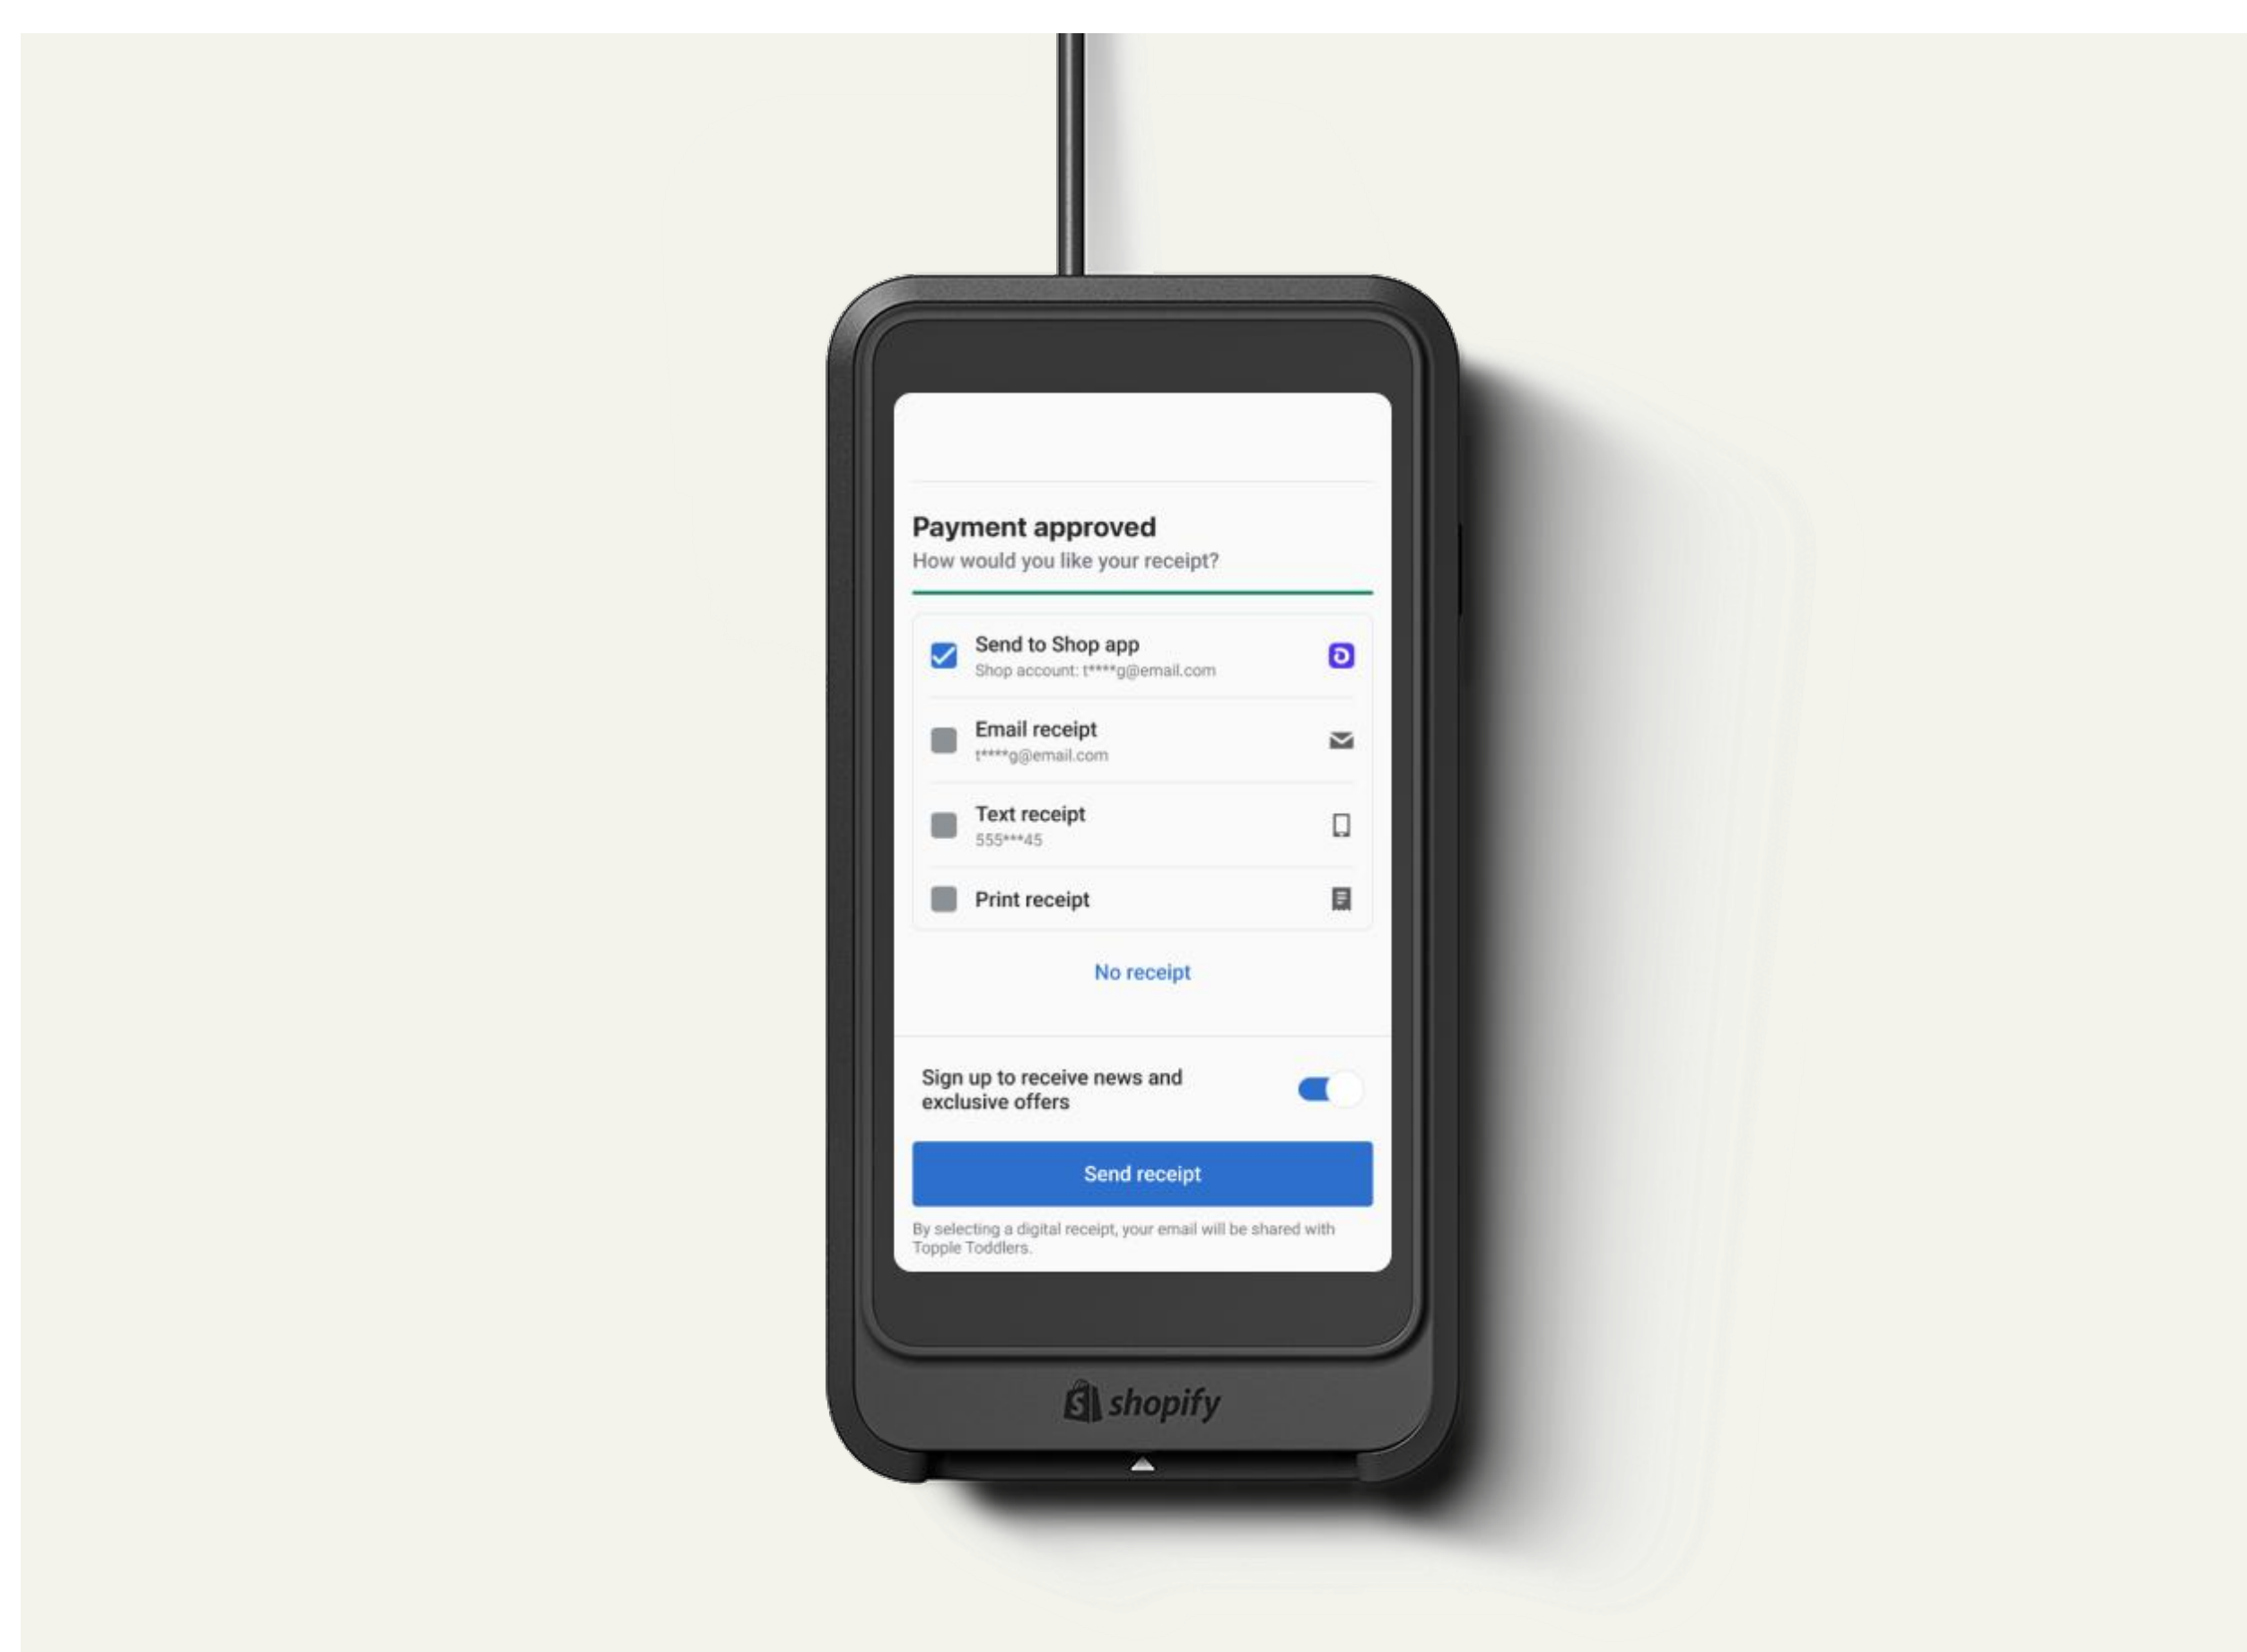

For POS tablets paired with POS Terminal:

After a customer has completed their payment, POS Terminal will present receipt options on the display. Customers can choose an email, SMS, print receipt, or no receipt.

When customers choose a digital receipt, customers can enter their email directly on POS Terminal.

Marketing opt-ins can also be collected from this screen.

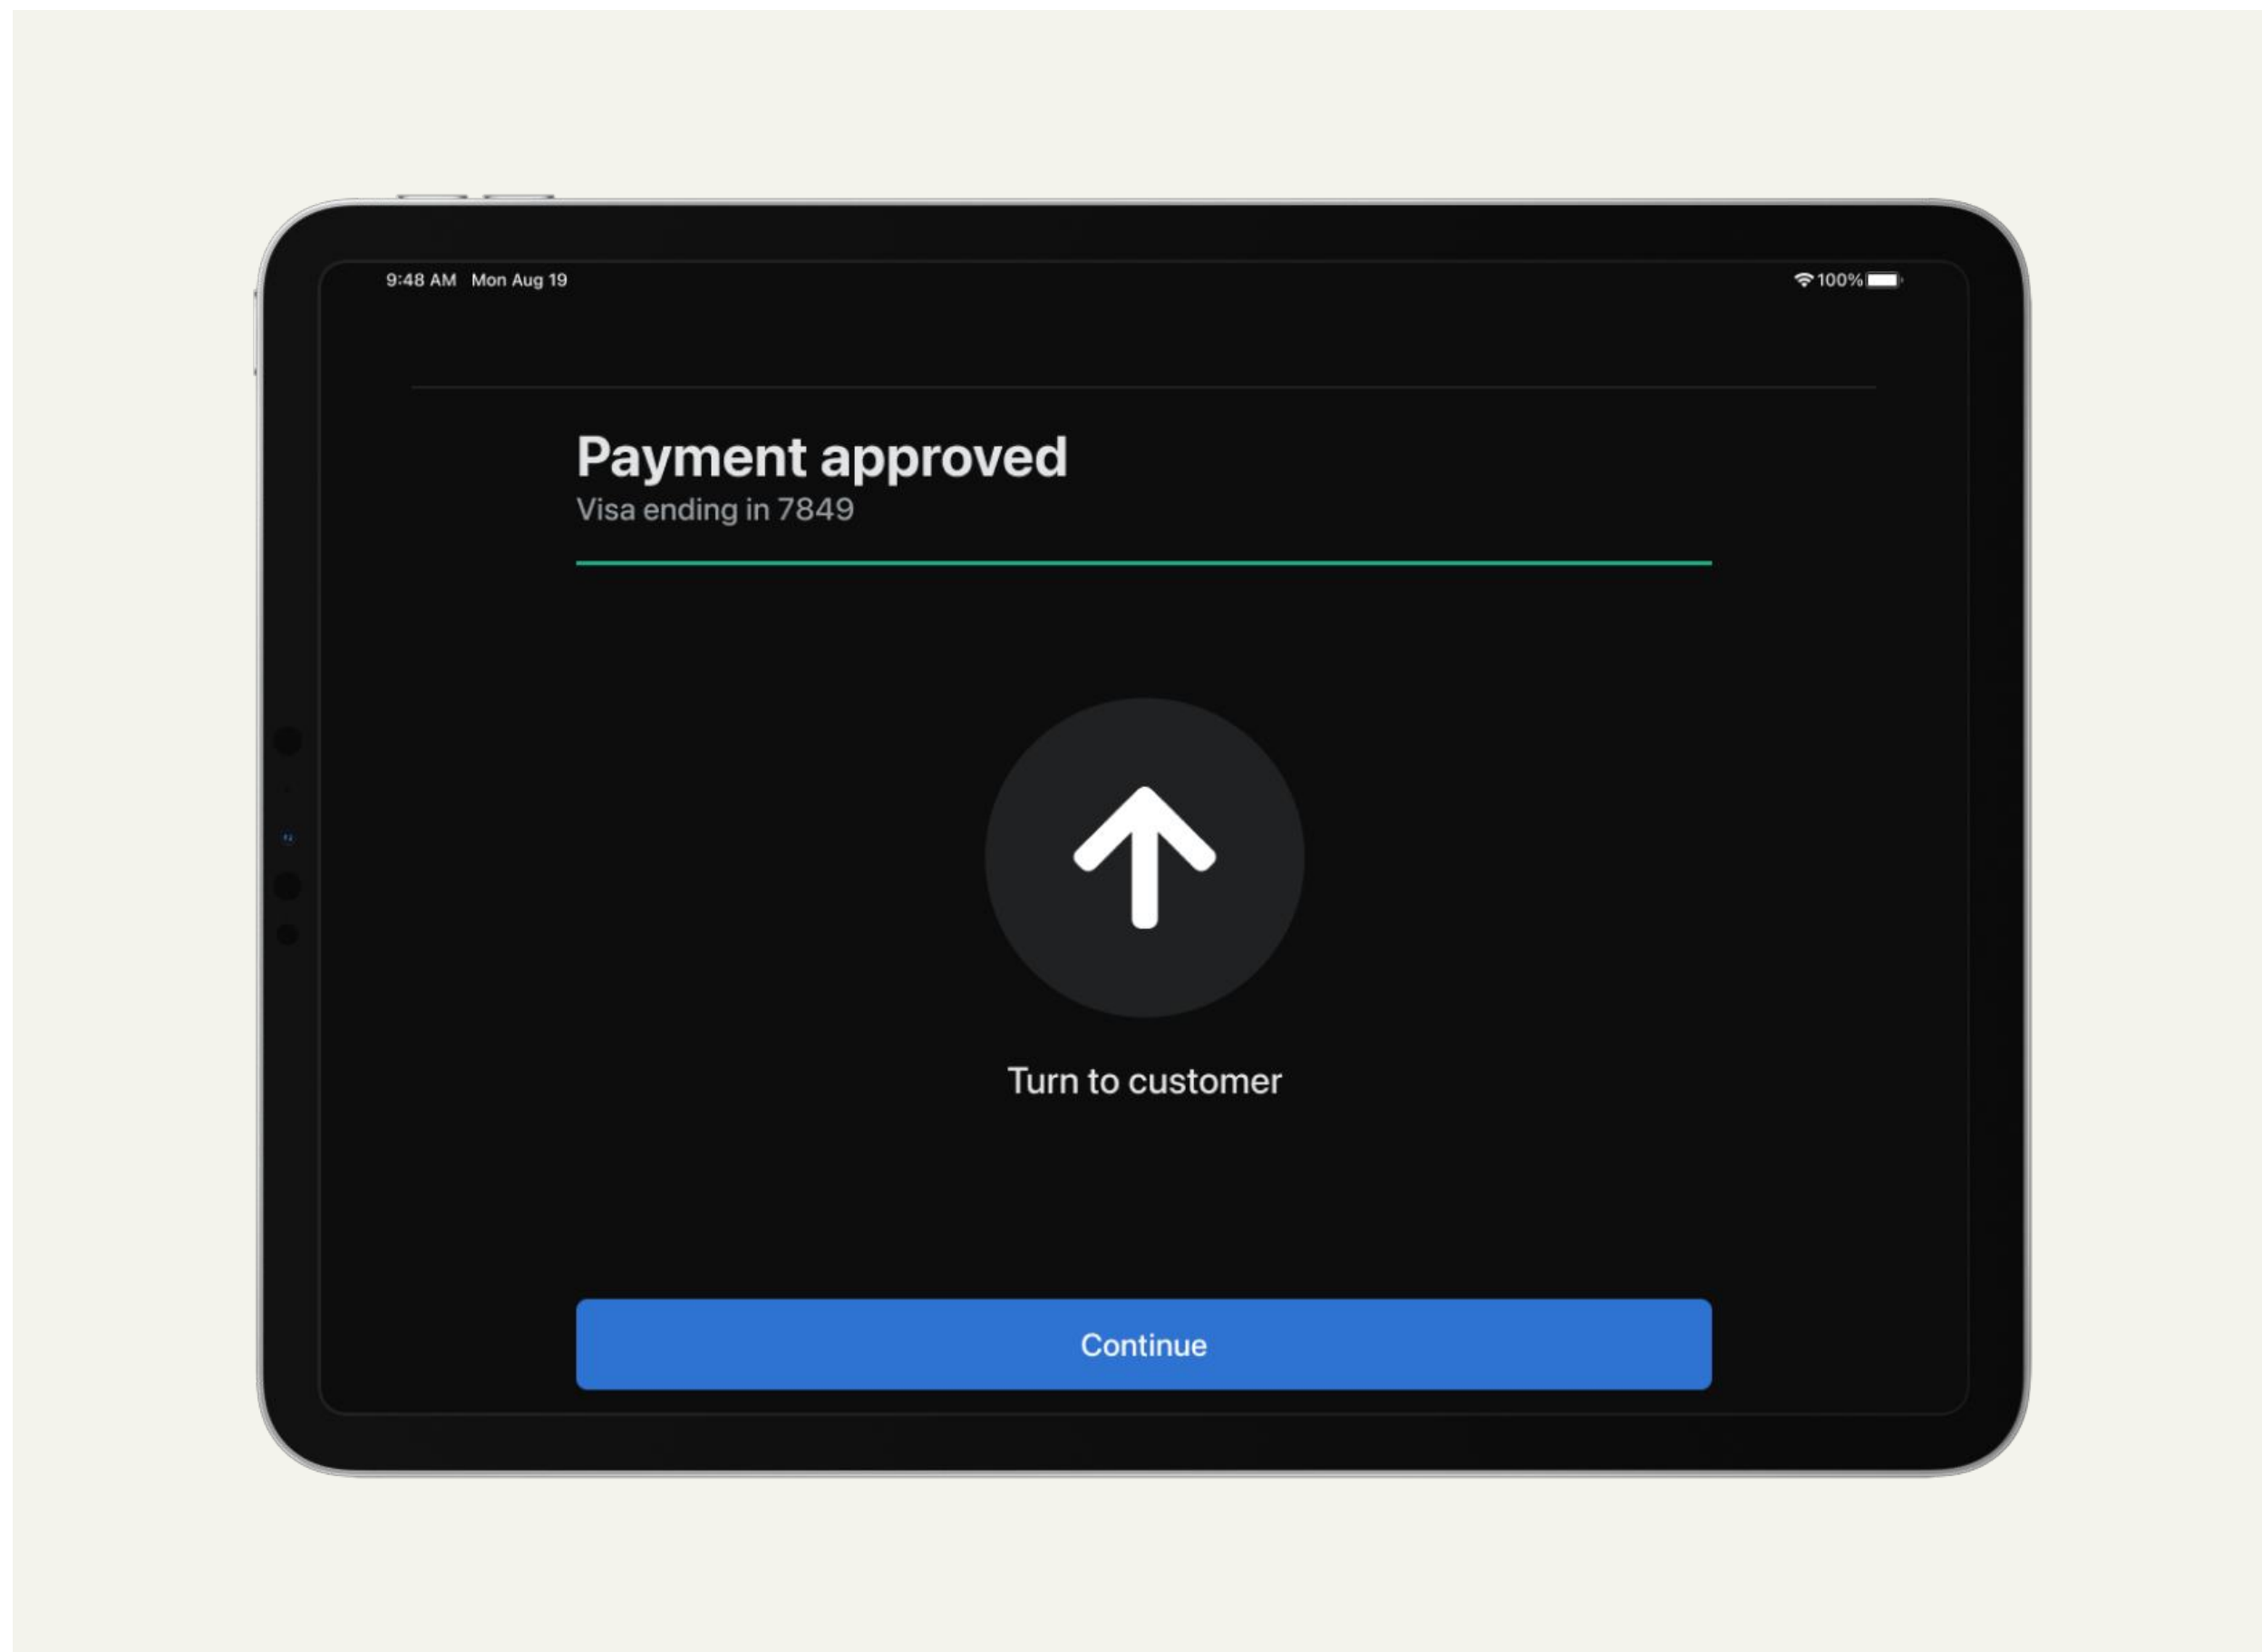

If the transaction matches a Shop Pay user, the email associated with their Shop account will be shown automatically at checkout—no email entry required.

Shop users may choose to have their receipt sent directly to the Shop app.

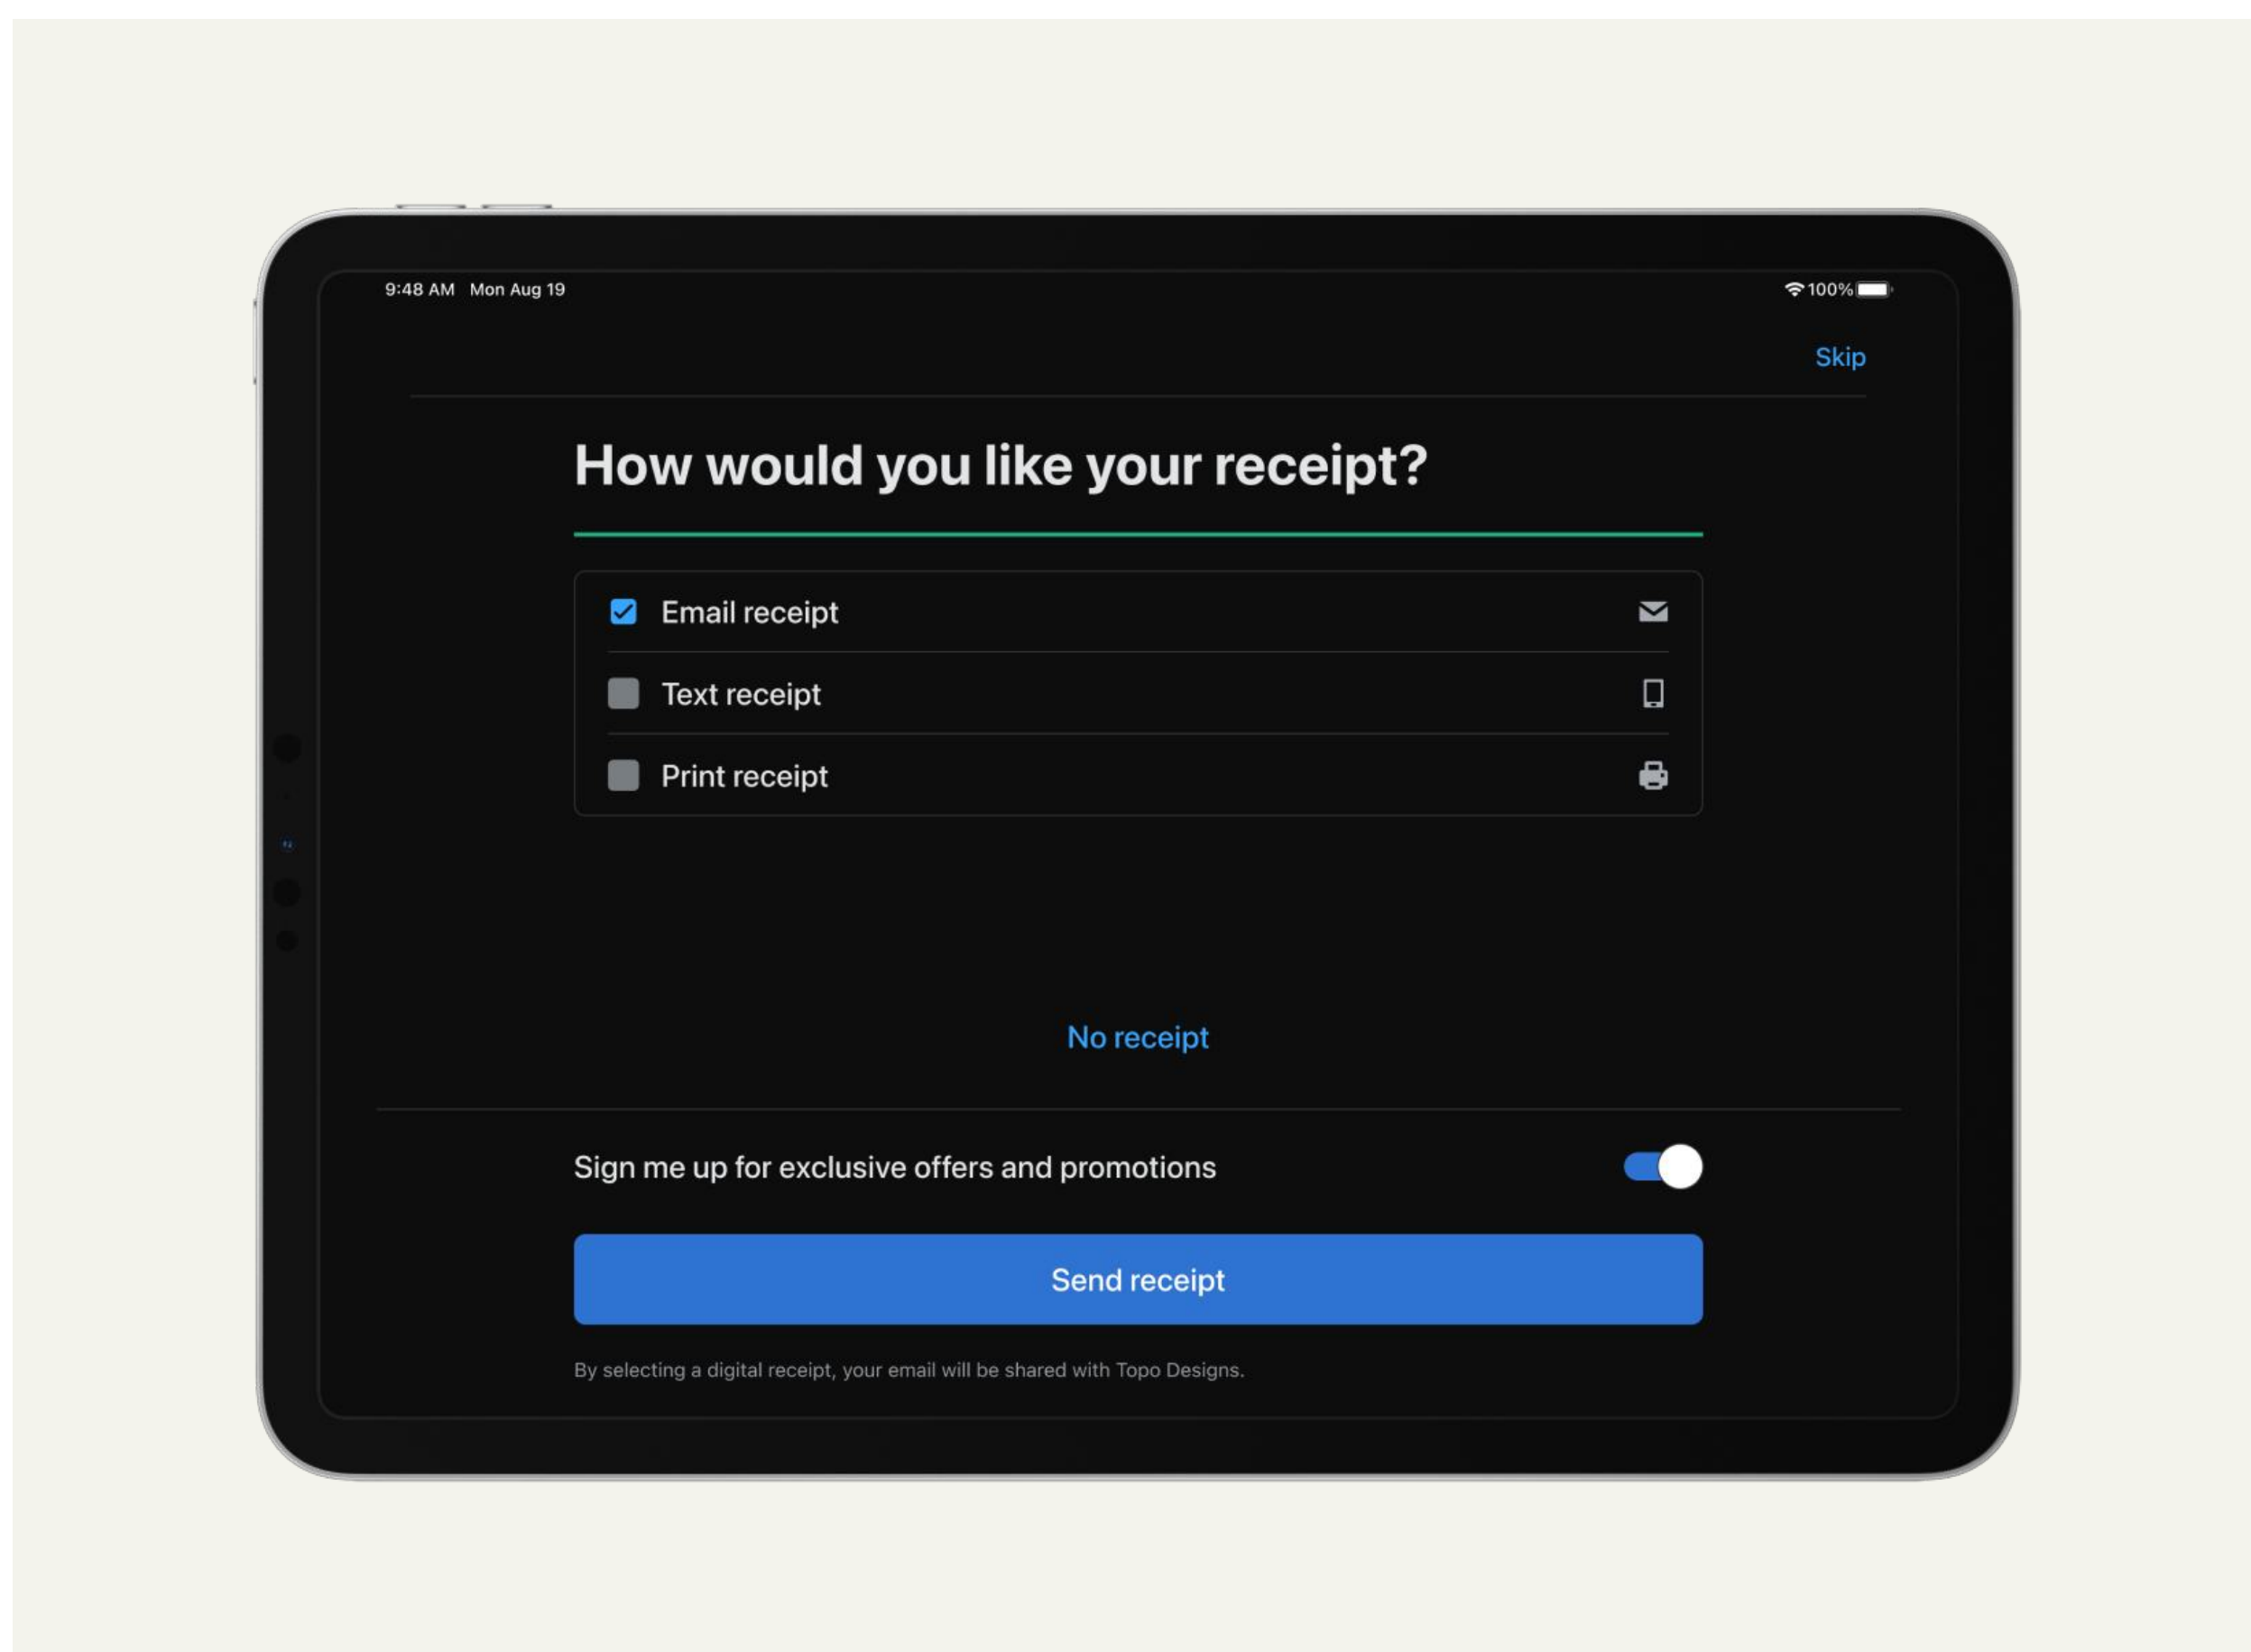

Customer receipt selection

The Shopify POS checkout can now prompt customers to select how they would like to receive a receipt and seamlessly enter their email for digital receipts.

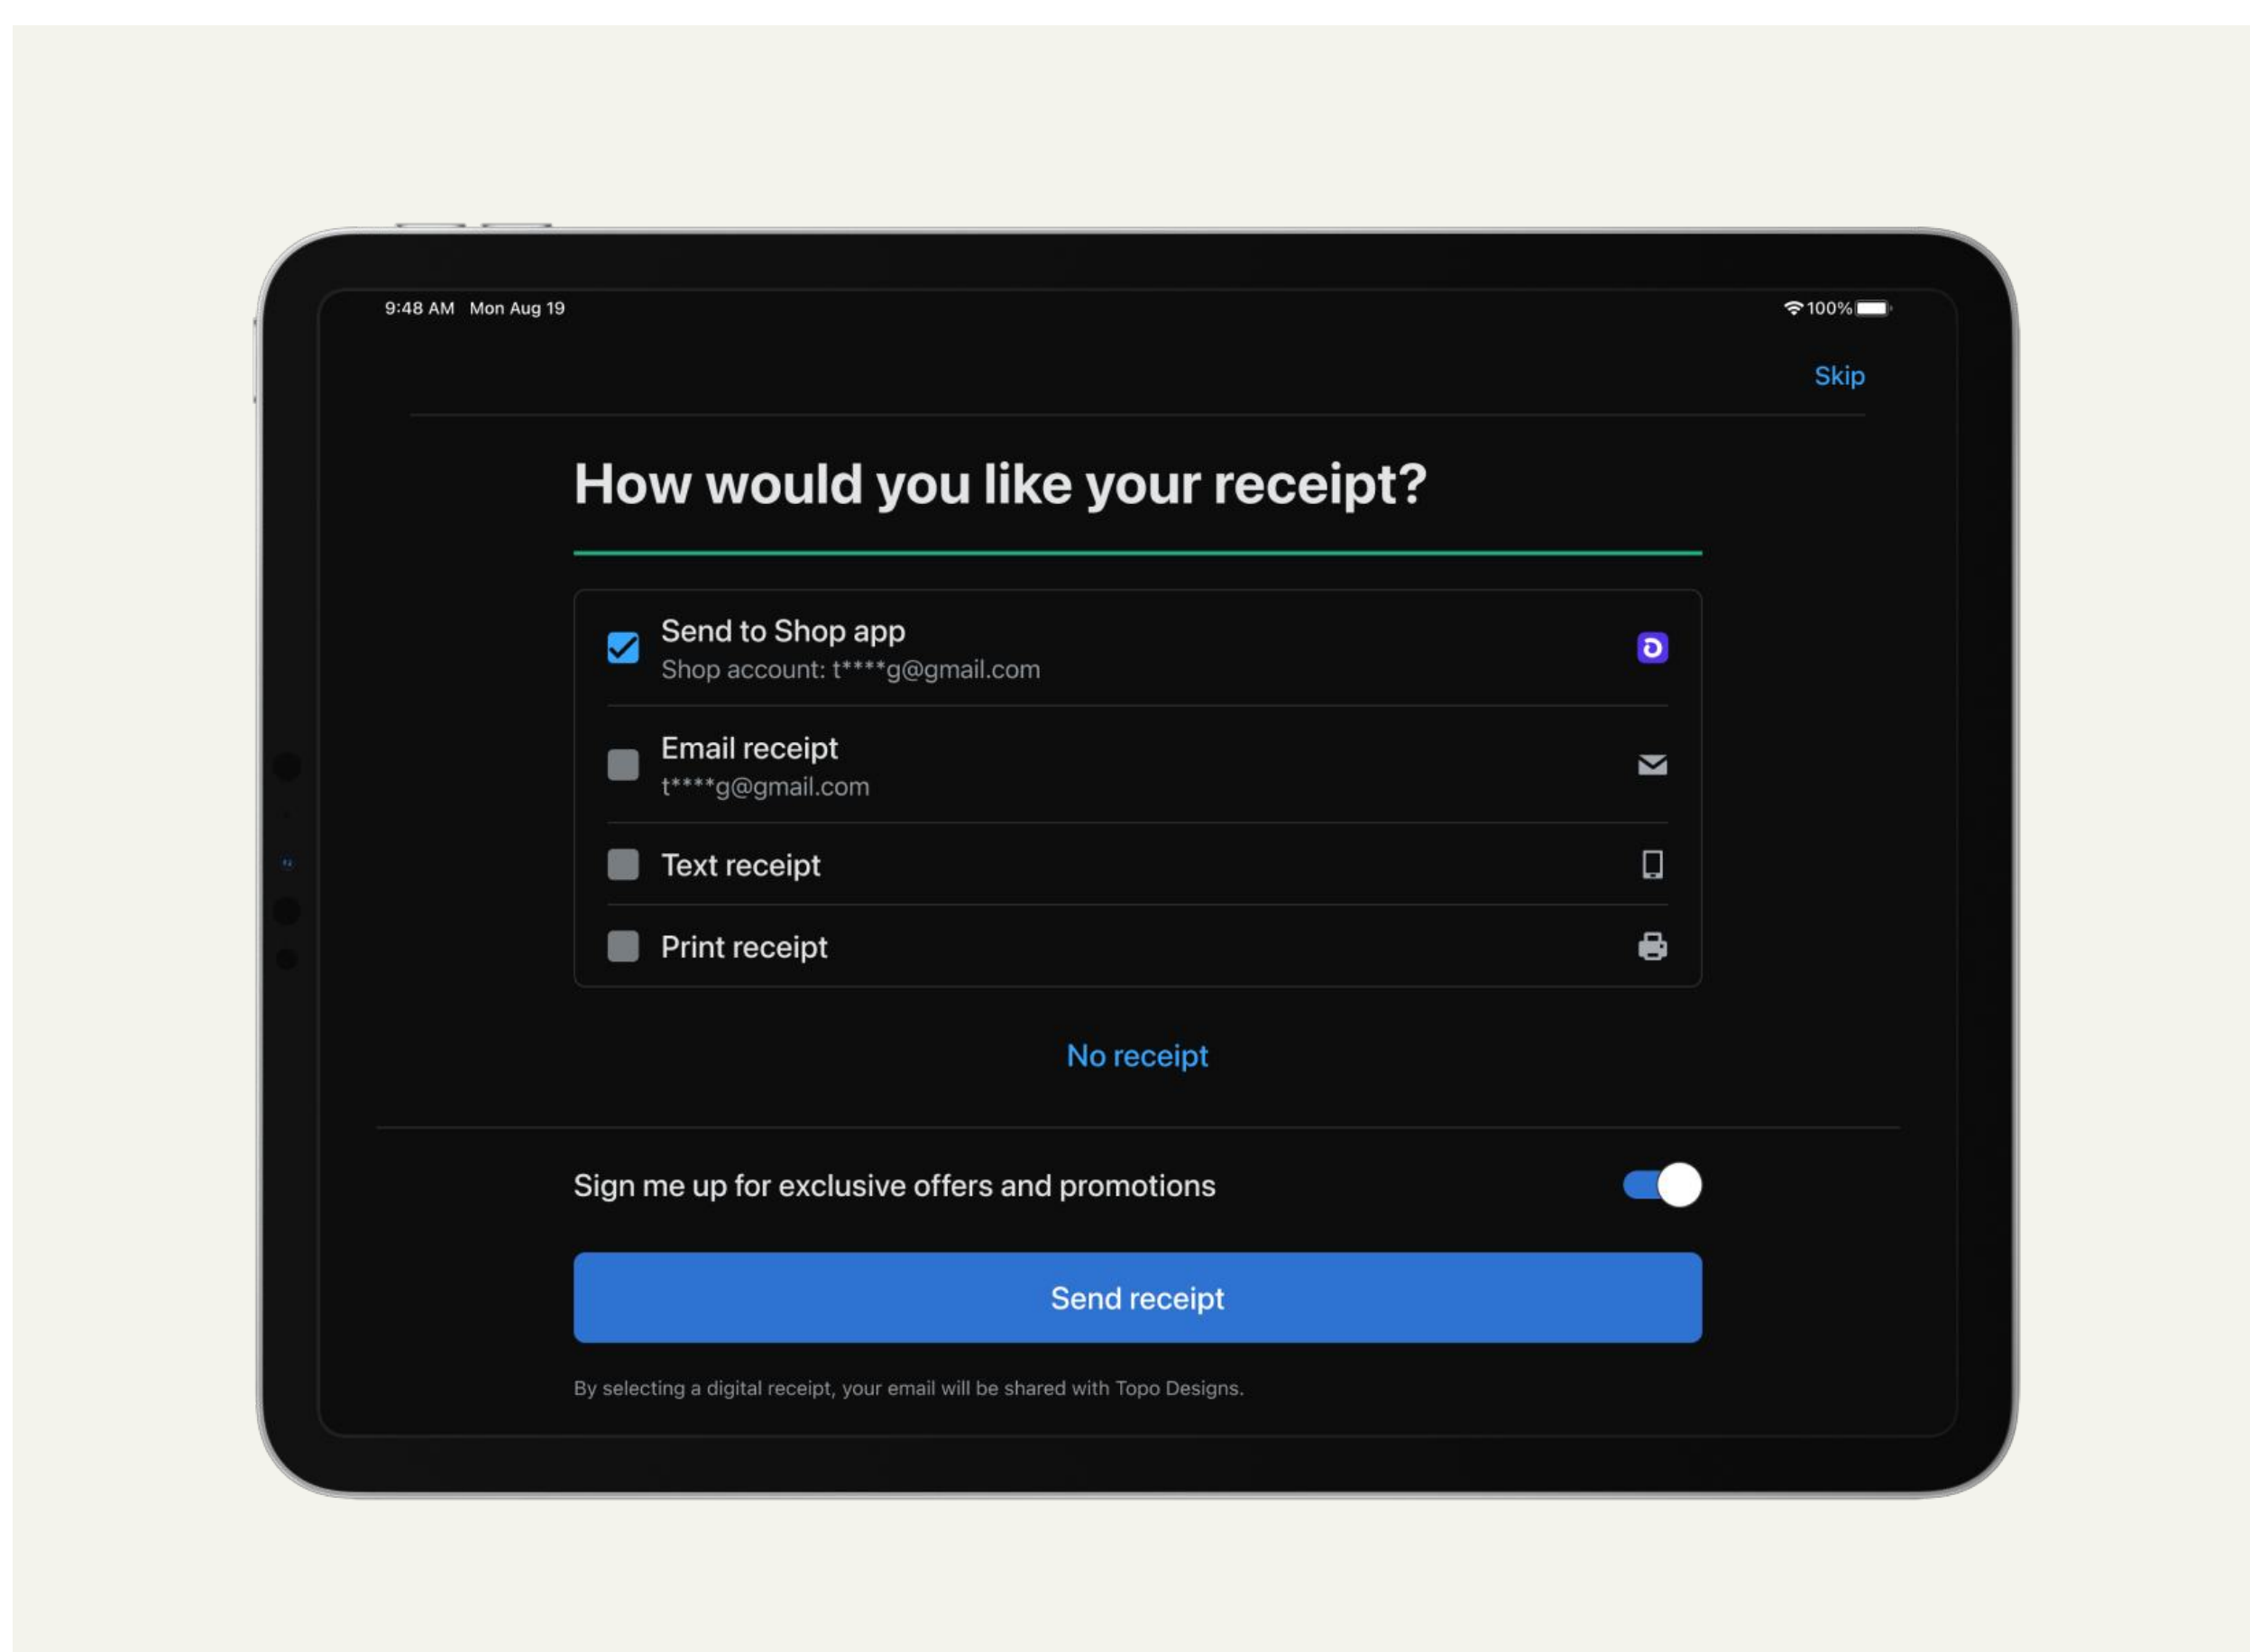

For POS tablets paired with Tap & Chip, WisePad 3, or Chipper BTX card readers:

After a customer has completed their payment, Shopify POS will now prompt you to turn the tablet to face the customer to select a receipt. Tap **Continue** and turn the tablet towards the customer.

Customers can then choose between an **email**, **text**, and **print** receipt, or select **no receipt**. When a digital receipt is selected, customers can enter their email or phone number on the tablet.

Marketing opt-ins can also be collected from this screen.

If the transaction matches a Shop Pay user, the email associated with their Shop account will be shown automatically at checkout—no email entry required.

Shop users may choose to have their receipt sent directly to the Shop app.
